

MetaInspector Desktop — Progress Report (Sprints 1-3)

Oct 8, 2026 · @Andleeb Hassan

Sprints 1 to 3 are complete: 15 of 23 tasks (65%) are done and all 86 automated tests pass.

Progress by sprint

Sprint	Scope	Tasks	Status
1	Core scraping engine	TSK-101 to 105	Merged (PR #1)
2	Desktop GUI	TSK-201 to 205	Merged (PR #2)
3	Google Sheets export and run history	TSK-301 to 305	PR ready for review
4	100-account benchmark and edge cases	TSK-401 to 404	Not started
5	.exe packaging and client handover	TSK-501 to 504	Not started

What was delivered

The app can now check accounts, show live results, copy them to Google Sheets, export files and keep a history of every run.

Sprint 1 — Core engine

- Blocks images, video and fonts for faster page loads
- Instagram and Threads extractors in English and Turkish
- Ban linking: a ban on either platform marks both as BANNED
- 5-worker dispatcher that stops automatically if Meta challenges the checker account

Sprint 2 — Desktop GUI

- Dark-theme window with username input, .txt import and 3 checking modes
- Colour-coded live results table
- Start / Pause / Stop, with the window staying responsive during a run
- "Setup Checker Account" login with a Connected / Disconnected indicator

Sprint 3 — Export and history

- "Copy for Google Sheets" button with a green confirmation toast
- Every run saved automatically to a local SQLite history database
- Run History window to re-copy or export any past run
- CSV and Excel export with correct Turkish characters
- Protection against spreadsheet formula injection

Testing

All 86 automated tests pass, including real-window GUI tests for copy, toast, export and history; screenshots were also checked visually.

Not yet verified by hand: pasting into Google Sheets with Ctrl+V and opening the exported files in Excel.
